RAILEXPO TEHRAN/IRAN

The 11th International Exhibition of RAIL TRANSPORTATION & Related Industries Equipment

RAILEXPO TEHRAN/IRAN

Rail Transportation Development:
Country's development along with Economic Prosperity

Transportation, as one of the infrastructure components, plays a crucial role in Sustainable Development as well as achieving the goals of Economic, Social and Cultural Development.

The immensity of Iran, the access to the international waters, and being located on the path of international North-South and East-West corridors, have increasingly illuminated Iran's premium position in international relations and trade.

Undoubtedly, any means of transportation such as rail, road, sea and air have their own features and advantages.

Railway transportation, however, has privileged a premium position among them by enjoying the particularities such as safty, cheapness, low energy consumption and environmental protection.

The salient and conspicuous privileges of Railway Industry along with its glorious effectiveness on the development of national and regional economy, have given the development, enrichment and fortification of railway transportation infrastructures, as one of the strategic plans, a top priority in the country's improvement planning.

Important events such as operating the East Rail Corridor Caspian Sea, beginning the construction of doubletrack railway lines on high traffic routes, improving suburban trains, operating the automatic train operation control system in Tehran-Mashhad route, increasing the Rail Wagon Fleet (locomotive, freight wagon, and trains), and beginning of Tehran - Esfahan high-speed rail contract were implemented last year by using the capabilities and ambitions of Iranian devoted experts and engineers, and it is crystal clear that the long-term objectives will not be accomplished without the participation of private sectors and high-powered industries.

Why Exhibit?

- inviting to produce the required equipment of RAI, Subway, and Transportation Companies
- Attending the Question & Answer Session with the managers and authorities of Rail Industry
- Unveiling and Introducing the latest achievements and technologies in Rail Transportation and Related Industries
- Presenting the capabilities and capacities of active companies in Rail Transportation and Related Industries
- Investing on Railway Projects and High-speed Trains

Who Visits?

- Railways Managers
- Honorable Representative of the Parliament
- Honorable Members of the Expediency Council
- Officials and Managers of the Government and Military Forces
- Ambassadors and Members of the Chamber of Commerce of European and Neighboring Countries
- Rail Industry Experts and Activists
- Managers of Factories in the Field of Equipment and Services of Rail Transportation Industry
- Artisans and Managers of the Related Industries

Iran's Railway Today

The Railways of the Islamic Republic of Iran (RAI) currently has 13,437 km standard rail network and 9500 km is also under construction. In this respect, the construction of some lines has started and needs to be contributed and invested by the national and international private sectors. By taking the Iran's Vision Policy of 2025 into consideration, there are plans to expand the nationwide railroad line to 2500 kilometers. One of the short-term plans of transportation development is to enhance and promote the current transportation of 28 million passengers to 45 million passengers. To do so, we need to add 18% passenger trains to the Rail Wagon Fleet.

With regard to the short-term plans, the amount of freight transportation will also need to be promoted from the current state of 34 million tons to 92 million tons. RAI will also need to add 11000 freight wagons to the Rail Wagon Fleet to achieve this goal so that the market share of Railway Transportation will be 30% of freight transport and 18% of passenger transport by 2025.

Other Countries are welcomed :

RAILEXPO TEHRAN/IRAN

The technology-owner from any countries are warmly welcomed to participate and invest on Railway Projects and High speed Trains.

The Railways of the Islamic Republic of Iran (RAI) is one of the most prominent transit route of the region. The connection of Iran railways to the CIS countries and consequently the connection of Iran railways to Russia and China, and also to the railways of Pakistan, India, Afghanistan, Iraq and Turkey along with their relations with the Persian Gulf Countries in order to enhance and develop the transit and also electrifying the railways are the main priorities of IRI.
